Product Requirements Document: LOGOS IN ME (MVP v3)

1. Product Overview

LOGOS IN ME is a strictly Scripture-centered mobile application designed to foster biblical literacy, memorization, and safe, guarded Christian community. It replaces the dopamine loop of standard social media with a structured rhythm of Scripture meditation and highly moderated, intentional fellowship.

- North Star Metric: "Completed Day 4" (User completes the weekly journey).
- Core Staging: Launches in Phase 0 (Local-Only MVP) to validate the core loop before activating matching and moderation queues in Phase 1.
- Tech Stack: Flutter (Mobile App - iOS/Android), Next.js (Admin Portal & Web Companion), Supabase (PostgreSQL with RLS, Auth, Edge Functions, Storage), PostHog for product analytics, Deepgram for speech recognition.

2. The Core Engine: The 4-Day Loop

The app revolves around a weekly, pace-locked scripture journey. Days cannot be skipped; previous days must be completed before the next unlocks at midnight.

Day	Phase	Description
Day 1	Encounter	Video introduction featuring the week's verse as an on-screen caption or closing title card.
Day 2	Context	Context cards explaining the historical and theological background of the text.
Day 3	Logos & Meditation	Full-bleed --sanctuary-gradient UI with ambient sound picker and a floating Save pill.
Day 4	Master & The Exchange	A larger Recitation Test, followed by The Exchange: Users type out their burdens, drag their mastered verse over the text (triggering a haptic), and watch the burden dissolve into a shareable Tear Sheet.

The Daily Recitation Ritual (Days 1–3):

To complete Days 1–3, users must pass two microphone recitations of the verse, requiring an 80% Levenshtein match. Passing triggers a checkmark and an amen_chime.wav sound effect.

3. Community & Connection Features

To maintain a safe environment, all freeform 1:1 text chat and open comment threads have been cut. Interpersonal interaction relies on fixed phrases, voice notes, and highly structured matching.

Groups & Matching

- Study Pods: Self-service algorithm matches groups of 4–6 users based on timezone, availability window (e.g., weekday morning), and biblical interest tags.
- Prayer Circles: Anonymous small groups matched to a user's pace and season. Members interact using fixed encouragement phrases (e.g., "Praying with you") and 1–2 minute voice notes that expire after 7 days.
- Friends, Buddy Up & Streak Family: Users can invite friends via secure codes or add from Circles. Families build joint streaks.
- User Search & Ping: Narrow, exact/prefix-match search for usernames/display names (no open directory). Users can send a gentle, cooldown-limited "Ping" (a pre-written push notification) to nudge accepted friends.

Community Spaces

- "In the Valley" Themed Rooms: Moderated topical boards (e.g., Navigating Grief in the Psalms, Faith in the Corporate Workplace). Users react with fixed phrases; posts are manually reviewed before going live.
- Voice Comfort Library: An opt-in repository where users can anonymously share their Day 4 recitations tagged by season (e.g., anxiety, doubt, gratitude) to comfort others.
- The Well: A persistent portal offering two paths for pastoral care:
    - Send a Private Prayer Request: Guaranteed written/audio response within 4 hours.
    - Schedule a 10-minute Prayer Call: Books directly via a Calendly/Cal.com embed to guarantee a connection.

4. User Story & Operational Justification

Primary Persona: Sarah (The Overwhelmed Seeker)

Profile: 29-year-old marketing strategist struggling with digital fatigue, anxiety, and maintaining a meaningful devotional life amid social media distractions.

User Story: *"As a busy Christian seeking spiritual depth, I want a structured daily ritual that combines Scripture meditation, voice recitation, and safe encouragement, so that I can internalize God's Word without falling into addictive social media loops or toxic comment threads."*

Key Journey & Technical Flow

1. Onboarding & Covenant: Sarah signs the Community Covenant. RLS policies create her initial user_profiles row with default privacy controls.
2. 4-Day Pace-Locked Journey: She completes Day 1 (Video Encounter) and Day 2 (Historical Context). The BLoC state controller locks Day 3 until midnight local time.
3. Recitation & Levenshtein Verification: On Day 3, she holds the record button. Flutter streams audio to the Deepgram Speech API, returning transcribed text. A local Dart utility calculates the Levenshtein distance against the target verse. Achieving an 82% match fires a success haptic and plays amen_chime.wav.
4. The Exchange (Day 4): Sarah types a heavy personal burden. Using a custom Flutter Draggable widget, she drags her mastered verse over the text. Upon collision, heavy impact haptic triggers, and a particle shader dissolves the text while creating a local shareable Tear Sheet PNG image.
5. Guarded Community: Sarah joins a Prayer Circle. She sends a 60-second voice prayer note. Flutter uploads the encrypted .m4a file to Supabase Storage, and an Edge Function schedules an automatic deletion task after 7 days.

5. Engagement & Retention Loops

- Grace Tokens: Users receive 3 tokens monthly. They can spend a token to recover a missed streak day.
- Milestone Awards: Achievements awarded for hitting streak milestones (e.g., 10 days) and total "Roots" planted.
- Birthdays & Gifts: Collects month and day only (no year/age). Friends are notified, and the user receives a digital gift (e.g., a "Word of Prophecy" or verse) on their day.
- Saved Verses & Prayer Altars: Users can save verses from their journey, the Voice Library, or meditation spaces to personalized altars.

- Daily Reminders: Scheduled push notifications ("Hide the Word in your heart") tied to the user's preferred time.

6. Visual Design & Sensory System (v3)

The design system uses Source Serif 4 for scripture and Inter for UI, relying on a deeply considered color palette to set a reverent tone.

Color Tokens

- Core: --ink (#2E2A24, primary text), --sand (#F2EAE0, base surface), --coral (#E8A98C, primary buttons/recording state).
- Gradients: --sanctuary-gradient (Teal to Coral for onboarding/meditation), --dune-gradient (Sand to Taupe for dashboards).
- Feature Bubbles: Specific semantic colors for the 9 Community Hub modules (e.g., Study Pods = dusty blue-green, Valley Rooms = clay).

Examen Mode (Time-of-Day Shift)

Between 8:00 PM and 5:00 AM, the app automatically shifts to an "Examen" palette (warm darks, no blue-blacks: --examen-bg #1E1B17, --examen-ink #F2EAE0). The Home Dashboard surfaces an Evening Examen card with 2-3 reflection prompts alongside the daily loop.

Sensory Polish

- Haptics: Fired on drag-and-drop actions (The Exchange) using heavy impact feedback and upon successful voice recitations using medium impact feedback.
- Audio: Uses sanctuary_chime.wav for daily reminders and amen_chime.wav to validate recitations via Flutter audioplayers package.

7. Security & Guardrails

- Community Covenant: Upon onboarding, users must digitally "sign" their typed name to a strict covenant outlining behavior, confirming the app is for spiritual growth, not romantic pursuit.
- Database Constraints: Built entirely on Supabase Row Level Security (RLS) to ensure users can only see profiles of accepted friends or mutual group members.
- Moderation Queues: All user-submitted content (Voice Library, Valley Room posts) defaults to a pending status for manual review before appearing to the public.

8. Technical Architecture & System Design

Architecture Overview

The platform employs a modern cross-platform architecture utilizing Flutter for the mobile client, Next.js (React/TypeScript) for the Web Admin Portal & Web Companion, and Supabase as the unified BaaS backbone.

8.1 Mobile App Architecture (Flutter)

- State Management: BLoC (Business Logic Component) pattern for clean separation of UI and domain logic. Features are modularized into independent domain blocks (e.g., JourneyBloc, RecitationBloc, CommunityBloc, ExamenBloc).
- Layering Architecture:
    - *Presentation Layer:* Flutter UI Widgets, Custom Render Objects for shaders/particle effects in The Exchange, Adaptive Layouts.
    - *Domain Layer:* BLoC Events, States, Use Cases, Pure Dart Levenshtein & Text Normalization Algorithms.
    - *Data Layer:* Supabase Client SDK, Hive / Isar database for offline local storage and encrypted caching.
- Audio Processing Pipeline: Uses record package for streaming audio recording and audioplayers for local ambient soundscapes. Audio buffers are compressed to .m4a format locally before transmission.
- Offline Support: Full local offline caching via Isar DB. Users can complete Days 1–3 offline; recitation validations run locally, queuing sync events for when connectivity is restored.

8.2 Web Companion & Admin Stack

- Framework: Next.js 14 (App Router) with TypeScript and Tailwind CSS.
- UI Components: Shadcn UI combined with Tremor for analytics dashboards.
- Admin Capabilities:
    - *Moderation Dashboard:* Review flagged posts in "In the Valley" rooms, listen to reported Voice Comfort Library submissions, and manage user bans.
    - *Content Management System (CMS):* Schedule weekly scripture drops, upload Day 1 video assets, configure context cards, and manage prayer topics.
    - *Pastoral Portal (The Well):* Direct interface for verified pastoral care team to view incoming private prayer requests and respond with text or voice audio.

8.3 Backend & Infrastructure (Supabase Ecosystem)

- Database Security: Row Level Security (RLS) guarantees isolated multi-tenant data access. Friends can only view shared profiles; circle voice notes are accessible exclusively to circle members.
- Storage: Buckets configured with signed short-lived URLs for voice notes (expire in 7 days). Automations handle lifecycle deletions.
- Edge Functions: Written in TypeScript/Deno for heavy operations: calculation of matching algorithms for Study Pods, push notification dispatches via FCM/APNS, and automated moderation sweeps using AWS Rekognition / OpenAI Moderation API.

9. Complete End-to-End Design Guide

9.1 Visual & Spatial Foundations

- Grid System: 8pt fluid grid for vertical rhythm; 16pt lateral padding across mobile viewports.
- Border Radius: Subtle curves (12px cards, 24px pills/floating actions, 8px inputs) to convey warmth without soft childishness.
- Typography Hierarchy:
    - *Scripture & Verse Display:* Source Serif 4 (SemiBold / Regular), leading 1.4, tracking -0.01em.
    - *UI Labels, Buttons & Body:* Inter (Medium / Regular), leading 1.25.

9.2 Design Tokens & Theme Specifications

```JSON
{
  "colors": {
    "light": {
      "ink": "#2E2A24",
      "sand": "#F2EAE0",
      "coral": "#E8A98C",
      "taupe": "#D9CFC4",
      "surface": "#FAF6F0"
    },
    "examen": {
      "bg": "#1E1B17",
      "ink": "#F2EAE0",
      "surface": "#2A2520",
      "coral": "#E8A98C"
    }
  },
  "gradients": {
```

```
    "sanctuary": "linear-gradient(135deg, #2D5A60 0%, #E8A98C 100%)",
    "dune": "linear-gradient(180deg, #F2EAE0 0%, #D9CFC4 100%)"
  }
}
```

9.3 Screen Breakdown & Motion Guidelines

1. Home Sanctuary: Clean feed presenting the active day card, current streak indicator, and quick links to Community Hub. Features an ambient background shift during Examen mode hours.
2. Recitation Studio: Minimalist UI dominated by a circular audio wave visualizer (--coral). Visual feedback pulses in real-time as speech is detected.
3. The Exchange: Interactive canvas. The burden text field occupies the top half; the mastered verse card resides at the bottom. Dragging triggers elastic physics via Flutter PhysicsSimulation.

Transitions & Micro-interactions: Page route transitions use custom smooth fades (300ms easeInOut). Button presses scale down slightly.
